 (k) there is no evidence of any disease of the digestive system including any abnormality of the liver and spleen;  
 (l) Inguinal hernia (unoperated) will be a cause for rejection.

N.B.—In the case of candidates who have been operated for hernia, they may be declared fit provided—

- (i) one year has lapsed since the operation; documentary proof to be furnished,  
 (ii) general tone of the abdominal musculature is good.  
 (iii) there has been no recurrence of the hernia or complication connected with the operation.

N.B.—(i) A candidate who has been operated for a hydrocele will be accepted if there are no abnormalities of the cord and testical and there is no evidence of filariasis;

- (ii) Undescended intra-abdominal testicle on the one side should not be a bar to acceptance of candidates for commissioning in the Armed Forces provided the other testicle is normal and there is no untoward physical or psychological effect due to the undescended testicle. Undescended testis retained in the inguinal canal or at the external abdominal ring is, however, a bar to acceptance unless corrected by operation.

 (o) there is no disease of the kidneys. All cases of Glycosuria and Albuminuria will be rejected;

 (s) there is no squint or morbid condition of the eye or of the lids which is liable to a risk of aggravation or recurrence;

No guarantee is given for ultimate acceptance and it should be clearly understood by the candidates that the decision whether an operation is desirable or necessary is one to be made by their private medical adviser. The Government will accept no liability regarding the result of operation or any expense incurred.

### 3. Standards for Height, Weight and Chest measurements.

(a) *Height*.—(i) The height of a candidate will be measured by making him stand against the standard with his feet together. The weight should be thrown on the heels and not on the toes or outer sides of the feet. He will stand erect without rigidity and with the heels, calves, buttocks and shoulders touching the standard; the chin will be depressed to bring the vertex of the head level under the horizontal bar, and the height will be recorded in centimetres; decimal fraction lower than 0.6 centimetre will be ignored and 0.6 centimetre or more will be recorded as one.

(ii) The minimum acceptable height for a candidate is 157.5 cm. except in the case of Gorkhas, Nepalese, Assamese and Garhwali candidates in whose case the height may be reduced by 5.0 cm.

NOTE.—Relaxation of height up to 2.5 cm. (5 cm. for the Navy) may be allowed where the Medical Board certifies that the candidate is likely to grow and come up to the required standard on completion of his training.

(iii) Air Force only.—To meet the special requirements for training as a pilot, the minimum height and leg length will be:—

Height	162.5 cm.
Leg length Hip to Heel	99.0 cm.

N.B.—On account of the lower age of candidates a margin of up to 5.0 cm. in height and 2.5 cm. in leg length may be given, provided it is certified by the Medical Board that the candidate is likely to grow and come up to required standard on completion of his training at the National Defence Academy.

(b) *Weight*.—(i) Weight will be taken with the candidate fully stripped or with under pants only. In recording weight, fraction of half a kg. will not be noted. A correlation table between age, height and average weight is given below for guidance:

Age period	15—16	16—17	17—18
Height (C.M.)	Weight Kg.	Weight Kg.	Weight Kg.
157.00 .. ..	43.5	45.0	47.0
160.00 .. ..	45.0	46.5	48.0
162.00 .. ..	46.5	48.0	50.0
165.00 .. ..	48.0	50.0	52.0
167.50 .. ..	49.0	51.0	53.0
170.00 .. ..	51.0	52.5	55.0
173.00 .. ..	52.5	54.5	57.0
175.00 .. ..	54.5	56.0	59.0
178.00 .. ..	56.0	58.0	61.0
180.00 .. ..	58.5	60.0	63.0
183.00 .. ..	61.0	62.5	65.0

(ii) It is not possible to lay down precise standards for weight in relation to height and age. The correlation table is, therefore, only a guide and cannot be applied universally. A 10 per cent ( $\pm 6$  kg. for the Navy) departure from the average weight given in the table is to be considered as within normal limits. There may nevertheless be some individual who according to the above standard may be over-weight but from the general build of the body are fit in every respect. The over-weight in such cases may be due to heavy bones and muscular development and not to obesity. Similarly for those who are under-weight, the criteria should be the general build of the body and proportionate development rather than rigid adherence to standards in the above table.

(c) *Chest*.—The chest should be well developed with a minimum range of expansion of 5.0 cm. The candidate's chest will be measured by making him stand erect with his feet together, and his arms raised over his head. The tape will be so adjusted round the chest that its upper edge touches the inferior angles of the shoulder blades behind, and its lower edge the upper part of the nipples in front. The arms will then be lowered to hang loosely by the side. Care will

be taken that the shoulders are not thrown upwards or backwards so as to displace the tape. The candidate will then be directed to take a deep inspiration several times and the maximum and minimum expansions of the chest will be carefully noted. The minimum and maximum will then be recorded in cm; decimal fraction lower than 0.6 centimetre will be ignored and 0.6 centimetre and above will be recorded as one.

N.B.—For Navy X-ray of chest is compulsory.

#### 4. Dental condition.

It should be ensured that a sufficient number of natural and sound teeth are present for efficient mastication.

(a) A candidate must have a minimum of 14 dental points to be acceptable. In order to assess the dental condition of an individual points are allotted as under for teeth, in good apposition with corresponding teeth in the other jaw:

- (i) Central incisor, lateral incisor, canine, 1st and 2nd premolar and underdeveloped 3rd molar—1 point each.
- (ii) 1st and 2nd molar and fully developed third molar—2 points each.

When all 32 teeth are present, there will be a total count of 22 points.

(b) The following teeth in good functional apposition must be present in each jaw:

- (i) Any 4 of the 6 anteriors.
- (ii) Any 6 of the 10 posteriors.

(c) Candidates suffering from severe pyorrhoea will be rejected. Where the state of pyorrhoea is such that in the opinion of the dental officer, it can be cured without extraction of teeth, the candidate may be accepted.
